NVerify — API Infrastructure Platform PRD

1. Product Overview

Product Name: NVerify

Product Type: Developer Infrastructure Platform (API-as-a-Service)

Current Core Product

NVerify currently focuses on:

- Transactional Email Infrastructure
- API Key Management
- SMTP/API Email Delivery
- Domain Authentication
- Developer Dashboard
- Usage Analytics

Future Features (Coming Soon)

- BVN Verification APIs
- NIN Verification APIs
- Video Call APIs
- Voice Call APIs
- KYC Infrastructure
- Identity Verification Services

2. Product Vision

To become Africa's trusted infrastructure layer for developer communication APIs and verification services.

3. Product Positioning

NVerify is positioned similarly to:

- Resend
- SendGrid
- Twilio

But optimized for:

- African startups
- Fast onboarding
- Simpler developer experience
- Future verification infrastructure

4. LANDING PAGE STRUCTURE

Landing Page Layout

SECTION 1 — NAVBAR

Navbar Items

Left Side:

- NVerify Logo

Center:

- Features
- Company

- Docs
- Pricing

Right Side:

- Login
- Get Started (Primary CTA)

Navbar Behavior

Sticky Navbar

- Navbar stays visible on scroll

Scroll Animation

- Transparent initially
- Becomes blurred dark background on scroll

Mobile Navbar

Hamburger menu:

- Features
- Company
- Docs
- Pricing
- Login
- Get Started

5. HERO SECTION

Layout Structure

LEFT SIDE (Text)

Headline

“Developer Infrastructure for Emails, APIs & Verification”

Subheadline

“Send transactional emails, manage secure API keys, authenticate domains, and prepare for next-generation verification infrastructure — all from one platform.”

Supporting Text

“NVerify helps startups and businesses integrate secure communication infrastructure with simple APIs and scalable delivery systems.”

CTA Buttons

Primary:

- Get Started Free

Secondary:

- View Documentation

Trust Indicators

Small text below CTA:

- Secure API Infrastructure
- Domain Authentication
- SMTP Support
- Scalable Delivery

RIGHT SIDE (Visual)

Recommended UI:

A modern developer dashboard preview showing:

- Email analytics
- API requests graph
- Domain verification status
- API key creation modal

Recommended Image Style

Use:

- Dark themed dashboard mockup
- Floating analytics cards
- Animated API requests

- Modern SaaS illustration

6. FEATURES SECTION

Section Header

“Built for Developers”

Feature Cards

Feature 1 — Email Infrastructure

Description:

- Transactional emails
- OTP delivery
- SMTP support
- API email sending

Status Tag:

- Available

Recommended Icon:

- Mail icon

Feature 2 — API Key Security

Description:

- Secret API keys
- Environment management
- Request authentication

Status:

- Available

Feature 3 — Domain Authentication

Description:

- SPF setup
- DKIM verification
- DNS validation

Status:

- Available

Feature 4 — Analytics Dashboard

Description:

- Delivery tracking
- API usage metrics
- Email activity logs

Status:

- Available

Feature 5 — BVN Verification APIs

Description:

- Identity verification infrastructure

Status Tag: **Coming Soon**

Feature 6 — NIN Verification APIs

Description:

- National identity verification APIs

Status Tag: **Coming Soon**

Feature 7 — Video Call APIs

Description:

- Real-time communication APIs

Status Tag: **Coming Soon**

Feature 8 — Voice Call APIs

Description:

- Voice SDK infrastructure

Status Tag: **Coming Soon**

7. COMPANY SECTION

About NVerify

“NVerify is building secure infrastructure tools for developers and businesses across Africa.”

Mission

“To simplify developer infrastructure through secure APIs.”

8. DOCUMENTATION SECTION

Preview Section

Show:

- API request examples
- SDK examples
- REST API structure

Code Preview

Example:

POST /api/v1/send-email

Authorization: Bearer API_KEY

CTA

- [Read Full Docs](#)

9. PRICING SECTION

Pricing Tiers

Starter

- Free testing
- Limited API requests

Growth

- Increased email volume
- Analytics access

Business

- Team collaboration
- Advanced analytics
- Priority support

Enterprise

- Dedicated infrastructure
- SLA support
- Custom integrations

10. FOOTER

Sections:

- [Docs](#)
- [Status](#)
- [API Reference](#)

- Company
- Contact
- Privacy Policy
- Terms

Socials:

- GitHub
- Twitter/X
- LinkedIn

11. AUTHENTICATION FLOW

Create Account Flow

Step 1 — Sign Up Screen

Options:

- Continue with Google
- Continue with GitHub

Email Signup Fields

Fields:

- Full Name
- Email
- Password

Button:

- Create Account

12. EMAIL OTP VERIFICATION FLOW

Step 2 — Verify Email

Flow:

1. User submits signup form
2. OTP sent to email
3. User inputs OTP
4. Backend validates OTP
5. Account activated

OTP Rules

- 6 digits
- Expiry: 5 minutes
- Resend after 30 seconds

Error States

- Invalid OTP
- Expired OTP
- Too many attempts

13. LOGIN FLOW

Login Fields

- Email
- Password

Options:

- Continue with Google
- Forgot Password

“Best Dashboard Structure for an API Infrastructure Company”

This dashboard should feel:

- Clean
- Technical
- Enterprise-grade
- Similar to Vercel + Resend + Stripe dashboard experience

14. DASHBOARD STRUCTURE

SIDEBAR NAVIGATION

Main Navigation

- **Dashboard**
 - ❖ Overview metrics
- **API Keys**
 - ❖ Manage secret keys
- **Email Services**
 - ❖ Email infrastructure
- **Domains**
 - ❖ Domain authentication
- **Logs**
 - ❖ API request logs
- **Analytics**
 - ❖ Usage metrics
- **Billing**
 - ❖ Subscription/payment
- **Team Members**
 - ❖ Invite collaborators
- **Webhooks**
 - ❖ Webhook management
- **Settings**
 - ❖ Account configuration

15. DASHBOARD HOME

TOP HEADER

Left:

- Workspace Name

Right:

- Notifications
- Account Avatar
- API Status Indicator

MAIN OVERVIEW CARDS

Card 1 — Emails Sent

Displays:

- Total emails sent today
- Percentage increase

Card 2 — API Requests

Displays:

- Total API calls
- Successful requests
- Failed requests

Card 3 — Active Domains

Displays:

- Verified domains count

Card 4 — Delivery Rate

Displays:

- Successful email delivery %

16. API KEYS PAGE

Purpose

Manage secure developer keys.

Features

Create API Key

Fields:

- Key Name
- Environment
 - Development
 - Production

Generated Data

System generates:

- Public Key
- Secret Key

Security

Secret key:

- Only visible once
- Copy button
- Revoke button

API Key Table

Columns:

- Key Name
- Environment

- Created Date
- Last Used
- Status

17. EMAIL SERVICES MODULE

Email Dashboard

Sections

Send Email API

Documentation preview

SMTP Credentials

Host:

- smtp.nverify.com

Port:

- 587

Sender Identities

Add:

- Sender email
- Sender name

Email Templates

Templates:

- OTP
- Welcome
- Verification
- Password Reset

Email Activity

Table Columns:

- Recipient
- Status
- Time
- Event

18. DOMAIN MANAGEMENT MODULE

Domain Dashboard

Add Domain Flow

Step 1

Input domain

Example:

- yourcompany.com

Step 2

System generates DNS records

Records:

- SPF
- DKIM
- MX

Step 3

User adds records to DNS provider

Step 4

NVerify verifies records

Statuses:

- Pending
- Verified
- Failed

Domain Table

Columns:

- Domain
- Status
- Emails Sent
- Last Checked

19. LOGS PAGE

Purpose

Allow developers debug requests.

Request Logs

Columns:

- Request ID
- Endpoint
- Status Code
- Timestamp
- Response Time

Filters

- Success
- Failed
- Date range

20. ANALYTICS PAGE

Metrics

Email Analytics

- Delivery rate
- Bounce rate
- Spam complaints

API Analytics

- Requests/minute
- Latency
- Error rates

Graphs

Recommended:

- Real-time line graphs
- Activity charts

21. BILLING PAGE

Sections

- Current Plan
- Usage Meter
- Payment Method
- Invoice History

Payment Providers

- Paystack
- Flutterwave
- Stripe

22. TEAM MANAGEMENT

Features

Invite Members

Roles:

- Owner
- Admin
- Developer
- Analyst

Permissions

- API access
- Billing access
- Logs access

23. WEBHOOKS MODULE

Features

Create Webhook Endpoint

Fields:

- Endpoint URL
- Event Type

Events

- email.sent
- email.failed
- domain.verified

Logs

Webhook delivery logs

24. SETTINGS PAGE

Account Settings

- Profile
- Password
- 2FA

Security

- Session management
- API restrictions
- IP whitelisting

25. COMING SOON MODULES

Verification Infrastructure

Future:

- BVN verification
- NIN verification
- KYC APIs

Communication APIs

Future:

- Video calling SDK
- Voice call APIs
